

The more advance technique is the indirect chipping done by using a kind of chiseling tool hit by the percutor like wood, bone, and antler on the material. It is easier to control the shaping of perfect tool.

indirect chipping technique

While for the pressing technique, the chipping tool is not hit directly on the material but is simply pressed either by hands' power or the body's weight. The use of this technique is more complicated as it needs skill to control the shaping of perfect tool.
